Running Your Day

A single command for each moment — morning to evening, all week long

8

Start your day [/morning-plan](#)

Claude pulls today's calendar, overdue tasks, unread emails, Slack mentions, iMessage action items, and your Notion inbox into a single prioritized plan. You see what matters, what can wait, and where your free time is. For each meeting, it pre-creates an Obsidian note with attendee context from past interactions.

Todoist

Gmail

Slack

iMessage

Notion

Readwise

10

Capture what you read [/capture](#)

Articles you've archived or shortlisted in Readwise flow into your Notion Knowledge Base. Highlights are preserved. Duplicates are caught automatically. Run this whenever your reading queue builds up.

Readwise

Notion KB

12

Process your inbox [/triage](#)

New KB items get classified: content type detected, 1–3 topics assigned from 18 categories, 1–5 tags selected from 87 options, a 2–3 sentence summary written, and key insights extracted. Actionable items become Todoist tasks automatically.

Notion KB

Todoist

3

Recall anything [/kb](#)

Search your knowledge base by topic, tag, type, status, or free text. Results combine Notion structured data with Readwise highlight search — find that article about MCP servers you read last week, or surface everything tagged “agents.”

Notion KB

Readwise

5

Sync your meetings [/sync-meetings](#)

Otter transcripts are matched to your calendar events by time, title, and attendees. Summaries, action items, and key decisions are extracted and written into your Obsidian meeting notes. People profiles are updated automatically.

Calendar

Obsidian

Todoist

6

Close your day [/reflect](#)

Claude compares your morning plan against what actually happened. Completed tasks are logged, incomplete P1/P2 tasks get rescheduled, and a 5–8 sentence reflection captures wins, gaps, and patterns. Everything is written to your Obsidian daily note.
